## NOAA FISHERIES PUBLICATIONS

Each year NOAA Fisheries produces three annual reports covering different aspects of the status of United States marine fisheries.

**Status of Stocks** is an annual report to Congress on the status of U.S. fisheries and is required by the Magnuson-Stevens Fishery Conservation and Management Act. This report, which is published each spring, summarizes the number of stocks on the overfished, overfishing and rebuilt lists for U.S. federally managed fish stocks and stock complexes. The report also shows trends over time, discusses the value and contributions of our partners, and highlights how management actions taken by NOAA Fisheries have improved the status of U.S. federally managed stocks. For example, the 2014 report shows that the number of stocks listed as subject to overfishing or overfished is at an all-time low. [http://www.nmfs.noaa.gov/sfa/fisheries\\_eco/status\\_of\\_fisheries/](http://www.nmfs.noaa.gov/sfa/fisheries_eco/status_of_fisheries/)

**Fisheries of the United States**, published each fall, has been produced in its various forms for more than 100 years. It is the NOAA Fisheries yearbook of fishery statistics for the United States. It provides a snapshot of data, primarily at the national level, on U.S. recreational catch and commercial fisheries landings and value. In addition, data are reported on U.S. aquaculture production, the U.S. fishery processing industry, imports and exports of fishery-related products, and domestic supply and per capita consumption of fishery products. The focus is not on economic analysis, although value of landings, processed products and foreign trade are included. <http://www.st.nmfs.noaa.gov/commercial-fisheries/fus/fus14/index>

**Fisheries Economics of the United States**, published each fall, provides a detailed look at the economic performance of commercial and recreational fisheries and other marine-related sectors on a state, regional and national basis. The economic impact of commercial and recreational fishing activities in the U.S. is also reported in terms of employment, sales and value-added impacts. The report provides management highlights for each region that include a summary of stock status, updates on catch share programs, and other selected management issues. Economic performance indicators for catch share programs are reported and will be extended to include non-catch share fisheries in the next edition. # Preface

## Fisheries Economics of the United States, 2014

Fisheries Economics of the United States, 2014, is the ninth volume in this annual series, which is intended to provide the public with easily accessible economic information about the nation's commercial and recreational fishing activities and fishing-related industries. This year's report covers the years 2005 to 2014 and provides descriptive statistics for the following categories: economic impacts of the commercial fishing and seafood industry; commercial fisheries landings, revenue and price trends; saltwater angler expenditures and economic impacts of marine recreational fishing; recreational fishing catch, effort and participation rates; and employer and non-employer establishment, payroll, employees and annual receipt information for fishing-related industries.

The report also provides management highlights for each region that include a summary of stock status, updates on catch share programs, and other selected management issues. Economic performance indicators for catch share programs are reported.

## Sources of Data

Information in this report came from many sources. Commercial landings, revenue, and price data, and recreational fishing effort and participation data, were primarily obtained from the Fisheries Statistics Division, Office of Science and Technology, and NOAA Fisheries. Other data sources included the Alaska Fisheries Science Center, NOAA Fisheries; Alaska Department of Fish and Game; California Department of Fish and Game; Oregon Department of Fish and Wildlife; Washington Department of Fish and Wildlife; the Pacific Coast Fisheries Information Network (PacFIN); Texas Parks and Wildlife Department; and Western Pacific Fisheries Information Network (WPacFIN). Economic impacts from the commercial fishing and seafood industry and recreational fishing sectors are from two separate national IMPLAN models of the Economics and Sociocultural Analysis Division, Office of Science and Technology, NOAA Fisheries. Fishing-related industry information was obtained from the U.S. Census Bureau, Bureau of Economic Analysis, and Bureau of Labor Statistics.

## Acknowledgments

Many people participated in the production of this report. Cameron Speir, Gabrielle Ryan and Cara Mayo are the editors of this report series; Rita Curtis, Sabrina Lovell, Gustavo Rubio and Cara Mayo were primary authors and analysts on this edition of Fisheries Economics of the United States. Key collaborators include Jami Larson, Lauren Dolinger Few, Karen Greene, Laura Johansen, Jean Lee, Michael Lewis, Michael Liddel, Alan Lowther, Cindy Thomson, Amy Bowman and Eric Thunberg. The report's design and layout was done by Avi Litwack and Jacqui Fenner.

NOAA Fisheries staff in the regional Fisheries Science Centers and Regional Offices provided expertise: Alan Haynie, Justin Hospital, Christopher Liese, Michael Travis and Stephen Holiman. Other colleagues who provided information and expertise included Mark Fisher (Texas Parks and Wildlife Department), Ed Hibschi (Pacific States Marine Fisheries Commission), and Williams Romberg (Alaska Department of Fish and Game).
