The total effort (number of hooks set) by the Hawaii-based (black) and international (blue) longline fisheries in each region and by quarter, for all grid cells with Hawaii-based effort from 1995 through 2014. Note that both deep-set and shallow-set effort are included because data for international effort do not provide information on the number of hooks per float. The regions are southwest (SW), central west (CW), northwest (NW), and northeast (NE).
