

Gulf of Mexico

- Alabama
- West Florida
- Louisiana
- Mississippi
- Texas

Gulf of Mexico Summary

Regional Context

The Gulf of Mexico region includes Alabama, Louisiana, Mississippi, Texas, and the Gulf Coast of Florida. These states combined share 1,631 miles of coastline divided as follows: Alabama, 53 miles; Louisiana, 397 miles; Mississippi, 44 miles; Texas, 367 miles; and the Gulf Coast of Florida, 770 miles. The tidal shoreline is much longer at 17,141 miles encompassing complicated networks of bayous, inlets, tidal rivers, and islands in some areas. Louisiana (7,721 miles) has the most extensive tidal shoreline, followed by Florida's Gulf Coast (5,095 miles), together accounting for 75% of the region's tidal shoreline. The inshore habitat created by this extensive tidal shoreline combined with the Gulf of Mexico's relatively warm sub-tropical waters help to create an area second only to Alaska in fisheries productivity.

The Gulf of Mexico's warm waters also help to create the country's highest potential for annual hurricane seasons that can disrupt commercial and recreational fishing, and every other aspect of life in its towns and cities. Because most fishing communities are located in low-lying coastal zones they are always at risk from the effects of hurricanes' high winds, associated storm surges, and heavy rain. Hurricanes Katrina, Rita, and Wilma in 2005 provide recent examples of the devastating potential of these storms.¹ Katrina was particularly damaging to fishing communities in Florida, Alabama, Mississippi, and Louisiana; Rita also affected Louisiana as well as Texas; and Wilma affected Florida. Since 1960, Florida has received more major disaster declarations due to hurricanes and tropical storms than the region's other states, followed in descending order by Louisiana and Texas. Alabama and Mississippi have received the fewest major disaster declarations for this cause.

Coastal erosion is another threat in this region. It is particularly notable along Louisiana's coastline. Most of Louisiana's fishing communities are located in this vulnerable area, for example, Empire, Venice, and Grand Isle.

The Gulf Coast is the center of a large fish processing industry that handles both domestically caught and imported products for consumption and other uses. Biloxi and its surrounding areas in Mississippi, and Bayou La Batre in Alabama, have been centers of this industry. Hurricane Katrina damaged or destroyed many processing facilities in these states.

In the aftermath of the storm, Mississippi changed its laws to allow casinos to be built on land within 800 feet of the

¹The assessment of Hurricane Katrina's impact on Gulf fishing communities and their fishing infrastructure can be accessed at: <http://sero.nmfs.noaa.gov/sf/socialsci/socialsci.htm> (accessed 10 June 2008).

Houses near marshy waters, Grand Isle, Louisiana

shoreline, resulting in increased demand for the real estate in the areas adjacent to the casinos. This has dramatically increased the value of this property leading many land owners including processors to relocate their businesses. These areas are now being redeveloped for non-fisheries uses, while many former fisheries workers are finding work in other industries.

The Gulf Coast is a rapidly developing center for a diverse tourism industry and has long been a destination for those seeking milder climates and coastal waters in retirement. Biloxi, Mississippi offers a quickly growing gaming and entertainment industry, but is declining as a destination for recreational fishing. Texas offers Padre Island National Seashore and saltwater angler services in a variety of places like Corpus Christi.

Although saltwater recreational fishing is found along the entire coast, Florida and Louisiana are particularly notable destinations. Several of Florida's top fishing communities that service saltwater anglers, for example, Key West, Ft. Myers, and Panama City, offer a variety of shoreside support services. Louisiana fishing communities with notable recreational fishing activity include Grand Isle and Venice.

The importance of the Gulf's fishing industry is celebrated in many coastal communities with seafood festivals that are held across the Gulf Coast every year. Festivals include the Blessing of the Fleet in places like Brownsville, Texas, Grand Isle, Louisiana, and Bayou la Batre, Alabama. There are also numerous seafood festivals that are focused on one or more species of seafood that are important to a given area such as the Florida Seafood Festival in Apalachicola, Florida, the Shrimp Festival in Gulf Shores, Alabama, and the annual Shrimpporee in Aransas Pass, Texas.

Fishing Communities Facts

- Many communities in the Gulf of Mexico were originally founded to exploit the rich marine resources.
- Some communities in the Gulf of Mexico, for example, Empire and Venice in Louisiana, are below sea level and protected by levies.
- In many coastal communities, fishermen can no longer afford to live near the water because increasing development and redevelopment of these areas has raised the cost of living beyond their means.

Seafood processing and sales

- In 2006, there were 174 fish processing plants and 255 wholesale businesses located in the Gulf region that together employed 10,841 workers.
- Louisiana had the most wholesaler plants in 2006 (126) that together employed 661 workers, while Texas had the second highest number (77) that together employed 825 workers.

Shrimp fishery

- The combination of long term increases in expenses including marine diesel fuel, combined with the dramatic increase in the amount of relatively cheap imported farm raised shrimp, is making it very difficult for many Gulf fishermen to make a living in commercial fishing. Over 90% of the Nation's shrimp supply is now imported.
- Vietnamese fishermen are now an important part of the shrimp fishery in Mississippi and Louisiana.

Recreational fishing

- Florida had the most saltwater recreational fishermen in the United States in 2006: 3.7 million, and another 2.9 million saltwater anglers from other states reported saltwater fishing trips to Florida in that year. These recreational fishermen released just over 44% of their catch in 2006.

Historical context

- Coastal dwelling American Indians relied on the Gulf of Mexico's inshore marine resources for part of their subsistence for thousands of years before Europeans began arriving in the 16th century.
- Some of the first scientific studies of the Gulf's fishery resources were begun in 1884 by the U.S. Commission of Fish and Fisheries. They eventually included surveys of the oyster beds in areas near Apalachicola, Florida, and inshore waters of Alabama as well as other areas.

The Fishing Communities

Overall, 30 fishing communities in Alabama, 99 in Louisiana, 14 in Mississippi, 68 in Texas, and 119 in West Florida have been profiled by NMFS social scientists because of the nature of their links with commercial and/or recreational fishing. In 2006, 14 of the United States' top fifty ports by landings revenue were located in the Gulf region. They were: Bayou La Batre, Alabama; Dulac-Chauvin, Empire-Venice, Golden Meadow-Leeville, Intracoastal City, Laffitte-Barataria, Louisiana; Brownsville-Port Isabel, Port Arthur, Galveston, and Palacios, Texas; and Apalachicola, Fort Myers, Key West, Tampa Bay-St. Petersburg, Florida. On average, the Gulf of Mexico accounted for 21% of U.S. annual landings revenue from 1997-2006.

The Gulf's top fishing communities were typically smaller towns and villages with populations below 20,000 persons. However, one major metropolitan center approaching 2 million (Houston, Texas), and a few larger coastal cities also have significant fisheries involvement (Tampa and St. Petersburg, Florida; Mobile, Alabama; and Brownsville, Texas). Louisiana's and Alabama's top fishing communities are most likely to have populations below 5,000. Nine of Louisiana's top ten fishing communities and seven of Alabama's top ten fishing communities fall in this group.

Community Resiliency, Growth, Marine Health, and Well Being

According to the 2000 U.S. Census, 9.2% of families lived below the poverty line in the U.S., the median income level was \$42,000, and 18% of residents over five years of age spoke a language other than English at home. In comparison, the Gulf region has a higher percentage of families living in poverty, a lower median income level, and a higher percentage of residents older than five who spoke a language other than English at home. The differences between the demographics of most, though not all, of the Gulf region's fishing communities and the rest of the U.S. is quite striking. More information on these and other factors that may affect community resiliency are discussed below.

Alabama

The percentage of family households below the poverty level in Alabama in 2000 was 12.5%. The family household poverty rate in fishing communities was generally higher. Coden (24.3%), Bayou la Batre (22.9%), Irvington (18%) and Mobile (17.9%) had the highest poverty rates. The poverty rates in three of the top fishing communities (Dauphin Island, Grand Bay, and Foley) was lower than the national average.

Some communities have memorials dedicated to fishing including parks and monuments that honor commercial fishing (for example, Cortez, Florida and Biloxi, Mississippi). Some have museums with exhibits that highlight commercial and recreational fishing in the Gulf of Mexico (for example, the Texas Maritime Museum in Rockport, Texas).

Gulf of Mexico Summary

The percentage of residents over five years of age who spoke a language other than English was 3.9% for the state. With the exception of Bayou La Batre (29.1%), the other fishing communities for which information was available, had a much lower rate of residents who spoke a language other than English at home when compared to the national rate.

The state population grew 6.5% between 1997 and 2006. The number of building permits issued grew 81% and the unemployment rate declined 20% for this period. From 2005-2006, the number of building permits issued increased 4.6%. There were 16 disaster declarations and three emergency declarations during the 1997-2006 time period.

Louisiana

In Louisiana, the percentage of households below the poverty line was 15.8%. Across fishing communities, the household poverty rate ranged from 9.1% (Grand Isle) to 33% (Abbeville), with three fishing communities (Abbeville, 33%, St. Bernard, 30%, and Dulac, 27.8%) having poverty rates more than three times the national average.

The percentage of Louisiana residents over five years of age who spoke a language other than English was approximately half the national average. However, some fishing communities (Golden Meadow, 40%, Chauvin, 34%, and Dulac, 37.4%) had roughly double or more the national average. The median education level attained in Venice ("some high school") was lower than both the state ("some college") and other fishing communities' levels ("high school graduate").

State population declined 1.5% between 1997 and 2006, largely due to out-migration after Hurricanes Katrina and Rita (5% decline 2005-2006). In contrast, the issuance of building permits increased 89% during this period, with a 26% increase occurring from 2005-2006. There were 15 disaster declarations and seven emergency declarations from 1997 to 2006.

Mississippi

The percentage of family households below the poverty line in Mississippi was the highest in the region (16%), and the percentage of residents who spoke a language other than English at home was the lowest in the region (3.6%). With the exception of Pascagoula (18.1%), Mississippi's top fishing communities had poverty rates at or lower than the state rate. However, four of these communities had rates above the national poverty level. The percentage of residents in the top fishing communities over five years of age who spoke a language other than English was well below the national rate though generally higher than the state rate.

Mississippi's population growth was 6.5% between 1997 and 2006. The unemployment rate increased 11.5% during this period (6.8% in 2006, the highest in the region). The issuance of building permits increased 65% from 1997-2006, increasing 24% post Hurricane Katrina (2005-2006). There were 14 disaster declarations and two emergency declarations during the 1997-2006 time period.

Texas

In Texas, the percentage of family households below the poverty line was 12%. The poverty rates in the top fishing communities were substantially higher and five of the top Texas fishing communities were roughly twice the national average or more: Brownsville, 32.4%, Port Arthur, 22.9%, Freeport, 22.3%, Port Isabel, 21.7%, and Palacios, 19.8%.

Brownsville (87%), Port Isabel (71%), Palacios (50%), and Freeport (45%) also had the highest percentage of residents over five years of age who spoke a language other than English at home. With the exception of Nederland (\$45,000) and Port Neches (\$48,000), the median income level in the top fishing communities was lower than the national median income level.

Between 1997 and 2006, Texas' population increased 22%, the number of building permits issued increased 72%, and the unemployment rate fell 9.3%. The number of building permits issued increased 2.9% from 2005-2006. There were 16 disaster declarations and five emergency declarations during the 1997-2006 time period.

West Florida

The percentage of family households below the poverty line in Florida was 9%, with poverty rates in the fishing communities the lowest on average in the region. The western Florida fishing communities of Cortez (7.3%), Key West (5.8%), Madeira Beach (4.1%), and Fort Myers Beach (3%) all had poverty rates below the state and national rates. The poverty rate in Apalachicola (20%) was twice the national rate, while the poverty rates in the other fishing communities ranged from 9.2% to 14%. The percentage of residents over five years of age who spoke a language other than English was less than 8% for six communities, but between 23% and 25% in three other fishing communities.

At the state level, population grew 23% between 1997 and 2006. The number of building permits issued increased 52% despite falling 30% from 2005-2006. There were 23 disaster declarations – more than any other state in the region – and six emergency declarations during the 1997-2006 time period.

List of Fishing Communities & Ports

The following list contains fishing communities and ports that have been identified by NMFS social science staff as having ties to commercial and/or recreational fisheries in the Gulf of Mexico region. Profiles of these fishing communities are available to the public in the following publications:
